$$

## Moments of a Polytope

- Let $P \subset \mathbb{R}^{d}$ be a full-dimensional polytope.
- $\mu_{P}$ : uniform probability distribution on $P$
- moments

$$
m_{i_{1} i_{2} \ldots i_{d}}(P):=\int_{\mathbb{R}^{d}} w_{1}^{i_{1}} w_{2}^{i_{2}} \ldots w_{d}^{i_{d}} \mathrm{~d} \mu_{P} \quad \text { for } i_{1}, i_{2}, \ldots, i_{d} \in \mathbb{Z}_{\geq 0}
$$

## Moments of a Polytope

- Let $P \subset \mathbb{R}^{d}$ be a full-dimensional polytope.
- $\mu_{P}$ : uniform probability distribution on $P$
- moments

$$
m_{i_{1} i_{2} \ldots i_{d}}(P):=\int_{\mathbb{R}^{d}} w_{1}^{i_{1}} w_{2}^{i_{2}} \ldots w_{d}^{i_{d}} \mathrm{~d} \mu_{P} \quad \text { for } i_{1}, i_{2}, \ldots, i_{d} \in \mathbb{Z}_{\geq 0}
$$

## Known:

The list of all moments $\left(m_{\mathcal{I}}(P) \mid \mathcal{I} \in \mathbb{Z}_{\geq 0}^{d}\right)$ uniquely encodes $P$. $\rightsquigarrow$ Can recover $P$ from its moments.

## Moments of a Polytope

- Let $P \subset \mathbb{R}^{d}$ be a full-dimensional polytope.
- $\mu_{P}$ : uniform probability distribution on $P$
- moments

$$
m_{i_{1} i_{2} \ldots i_{d}}(P):=\int_{\mathbb{R}^{d}} w_{1}^{i_{1}} w_{2}^{i_{2}} \ldots w_{d}^{i_{d}} \mathrm{~d} \mu_{P} \quad \text { for } i_{1}, i_{2}, \ldots, i_{d} \in \mathbb{Z}_{\geq 0}
$$

## Known:

The list of all moments $\left(m_{\mathcal{I}}(P) \mid \mathcal{I} \in \mathbb{Z}_{\geq 0}^{d}\right)$ uniquely encodes $P$.
$\rightsquigarrow$ Can recover $P$ from its moments.
Caution: The moments are not independent of each other.

## Our Goal:

Study the dependencies among the moments!

## Moment Varieties

- We assume: $P \subset \mathbb{R}^{d}$ is full-dimensional, simplicial, and has $n$ vertices

## Moment Varieties

- We assume: $P \subset \mathbb{R}^{d}$ is full-dimensional, simplicial, and has $n$ vertices
- We can vary the vertices of $P$ locally without changing the combinatorial type $\mathcal{P}$ of $P$
$\rightsquigarrow m_{\mathcal{I}}(P)$ is a locally defined function of the vertex coordinates

## Moment Varieties

- We assume: $P \subset \mathbb{R}^{d}$ is full-dimensional, simplicial, and has $n$ vertices
- We can vary the vertices of $P$ locally without changing the combinatorial type $\mathcal{P}$ of $P$
$\rightsquigarrow m_{\mathcal{I}}(P)$ is a locally defined function of the vertex coordinates
$\rightsquigarrow$ For every combinatorial type $\mathcal{P}$ and every finite subset $\mathcal{A} \subset \mathbb{Z}_{\geq 0}^{d}$, we have a rational function

$$
\begin{aligned}
m_{\mathcal{P}, \mathcal{A}}:\left(\mathbb{R}^{d}\right)^{n} & \rightarrow \mathbb{R}^{|\mathcal{A}|} \\
P & \longmapsto\left(m_{\mathcal{I}}(P)\right)_{\mathcal{I} \in \mathcal{A}}
\end{aligned}
$$

## Moment Varieties

\end{aligned}
$$

- We assume: $0 \in \mathcal{A} \rightsquigarrow m_{\mathcal{P}, \mathcal{A}}: \mathbb{C}^{d \times n} \rightarrow \mathbb{P}_{\mathbb{C}}^{|\mathcal{A}|-1}$
- Moment variety

$$
\mathcal{M}_{\mathcal{A}}(\mathcal{P}):=\overline{m_{\mathcal{P}, \mathcal{A}}\left(\mathbb{C}^{d \times n}\right) \subset \mathbb{P}_{\mathbb{C}}^{|\mathcal{A}|-1}}
$$

## Example: Line Segments

- Let $P=[a, b] \subset \mathbb{R}^{1}$

$$
\begin{aligned}
\Rightarrow m_{i}(P)=m_{i}(a, b) & =\frac{1}{b-a} \int_{a}^{b} w^{i} \mathrm{~d} w=\frac{1}{i+1} \frac{b^{i+1}-a^{i+1}}{b-a} \\
& =\frac{1}{i+1}\left(a^{i}+a^{i-1} b+a^{i-2} b^{2}+\ldots+b^{i}\right)
\end{aligned}
$$

## Example: Line Segments

- Let $P=[a, b] \subset \mathbb{R}^{1}$

$$
\begin{aligned}
\Rightarrow m_{i}(P)=m_{i}(a, b) & =\frac{1}{b-a} \int_{a}^{b} w^{i} \mathrm{~d} w=\frac{1}{i+1} \frac{b^{i+1}-a^{i+1}}{b-a} \\
& =\frac{1}{i+1}\left(a^{i}+a^{i-1} b+a^{i-2} b^{2}+\ldots+b^{i}\right)
\end{aligned}
$$

$\Rightarrow m_{\text {LineSegments },\{0,1, \ldots, r\}}: \mathbb{C}^{2} \rightarrow \mathbb{P}^{r}$,

$$
(a, b) \longmapsto\left(m_{0}(a, b): m_{1}(a, b): \ldots: m_{r}(a, b)\right)
$$

## Example: Line Segments

- Let $P=[a, b] \subset \mathbb{R}^{1}$

$$
\begin{aligned}
\Rightarrow m_{i}(P)=m_{i}(a, b) & =\frac{1}{b-a} \int_{a}^{b} w^{i} \mathrm{~d} w=\frac{1}{i+1} \frac{b^{i+1}-a^{i+1}}{b-a} \\
& =\frac{1}{i+1}\left(a^{i}+a^{i-1} b+a^{i-2} b^{2}+\ldots+b^{i}\right)
\end{aligned}
$$

$\Rightarrow m_{\text {LineSegments, }\{0,1, \ldots, r\}}: \mathbb{C}^{2} \rightarrow \mathbb{P}^{r}$,

$$
(a, b) \longmapsto\left(m_{0}(a, b): m_{1}(a, b): \ldots: m_{r}(a, b)\right)
$$

- $\mathcal{M}_{\{0,1, \ldots, r\}}($ LineSegments $)$ is a surface in $\mathbb{P}^{r}$

## Example: Line Segments

Moment surface $\mathcal{M}_{\{0,1,2,3\}}($ LineSegments $) \subset \mathbb{P}^{3}$ in affine chart $\left\{m_{0}=1\right\}$

- Defined by $2 m_{1}^{3}-3 m_{0} m_{1} m_{2}+m_{0}^{2} m_{3}=0$

$$
\mathrm{IV}-\mathrm{XI}
$$

## Example: Line Segments

Moment surface $\mathcal{M}_{\{0,1,2,3\}}($ LineSegments $) \subset \mathbb{P}^{3}$ in affine chart $\left\{m_{0}=1\right\}$

- Defined by $2 m_{1}^{3}-3 m_{0} m_{1} m_{2}+m_{0}^{2} m_{3}=0$
- Singular along $\left\{m_{0}=m_{1}=0\right\}$

> IV - XI

## Example: Line Segments

Moment surface $\mathcal{M}_{\{0,1,2,3\}}($ LineSegments $) \subset \mathbb{P}^{3}$ in affine chart $\left\{m_{0}=1\right\}$

- Defined by $2 m_{1}^{3}-3 m_{0} m_{1} m_{2}+m_{0}^{2} m_{3}=0$
- Singular along $\left\{m_{0}=m_{1}=0\right\}$
- Contains twisted cubic curve (in red) corresponding to degenerate line segments [a, a] of length 0
IV - XI

## Example: Quadrilaterals

$$
\text { Let } \mathcal{A}:=\left\{\mathcal{I} \in \mathbb{Z}_{\geq 0}^{2}| | \mathcal{I} \mid \leq 3\right\} \text {. }
$$

Can we compute the moment hypersurface $\mathcal{M}_{\mathcal{A}}(\square) \subset \mathbb{P}^{9} ?$

## Example: Quadrilaterals

$$
\text { Let } \mathcal{A}:=\left\{\mathcal{I} \in \mathbb{Z}_{\geq 0}^{2}| | \mathcal{I} \mid \leq 3\right\} \text {. }
$$

Can we compute the moment hypersurface $\mathcal{M}_{\mathcal{A}}(\square) \subset \mathbb{P}^{9} ?$

## Observations:

The defining equation of $\mathcal{M}_{\mathcal{A}}(\square)$ is

- homogeneous with respect to the $\cdot \mathbb{Z}^{3}$-grading given by

$$
\operatorname{degree}\left(m_{i_{1} i_{2}}\right)=\left(1, i_{1}, i_{2}\right),
$$

## Example: Quadrilaterals

$$
\text { Let } \mathcal{A}:=\left\{\mathcal{I} \in \mathbb{Z}_{\geq 0}^{2}| | \mathcal{I} \mid \leq 3\right\} \text {. }
$$

Can we compute the moment hypersurface $\mathcal{M}_{\mathcal{A}}(\square) \subset \mathbb{P}^{9} ?$

## Observations:

The defining equation of $\mathcal{M}_{\mathcal{A}}(\square)$ is

- homogeneous with respect to the $\cdot \mathbb{Z}^{3}$-grading given by

$$
\operatorname{degree}\left(m_{i_{1} i_{2}}\right)=\left(1, i_{1}, i_{2}\right),
$$

- invariant under the natural action of the affine group Aff 2 .

## Example: Quadrilaterals

Using monodromy methods from numerical algebraic geometry, we compute that the defining equation of $\mathcal{M}_{\mathcal{A}}(\square) \subset \mathbb{P}^{9}$ has $\mathbb{Z}^{3}$-degree $(18,12,12)$.

## Example: Quadrilaterals

Using monodromy methods from numerical algebraic geometry, we compute that the defining equation of $\mathcal{M}_{\mathcal{A}}(\square) \subset \mathbb{P}^{9}$ has $\mathbb{Z}^{3}$-degree $(\mathbf{1 8}, \mathbf{1 2}, \mathbf{1 2})$.

## Proposition (K., Shapiro, Sturmfels)

The invariant ring $\mathbb{R}\left[m_{\mathcal{I}} \mid \mathcal{I} \in \mathcal{A}\right]^{\mathrm{Aff}_{2}}$ is generated by 6 invariants:

|  | $m_{00}$ | $s$ | $t$ | $h$ | $g$ | $j$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbb{Z}^{3}$-degree | $(1,0,0)$ | $(4,4,4)$ | $(6,6,6)$ | $(3,2,2)$ | $(8,6,6)$ | $(12,9,9)$ |
| \# terms | 1 | 25 | 103 | 5 | 168 | 892 |

## Example: Quadrilaterals

Using monodromy methods from numerical algebraic geometry, we compute that the defining equation of $\mathcal{M}_{\mathcal{A}}(\square) \subset \mathbb{P}^{9}$ has $\mathbb{Z}^{3}$-degree $(\mathbf{1 8}, \mathbf{1 2}, \mathbf{1 2})$.

## Proposition (K., Shapiro, Sturmfels)

The invariant ring $\mathbb{R}\left[m_{\mathcal{I}} \mid \mathcal{I} \in \mathcal{A}\right]^{\mathrm{Aff}_{2}}$ is generated by 6 invariants:

|  | $m_{00}$ | $s$ | $t$ | $h$ | $g$ | $j$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbb{Z}^{3}$-degree | $(1,0,0)$ | $(4,4,4)$ | $(6,6,6)$ | $(3,2,2)$ | $(8,6,6)$ | $(12,9,9)$ |
| \# terms | 1 | 25 | 103 | 5 | 168 | 892 |

We use the moments of various random quadrilaterals to interpolate the defining equation of $\mathcal{M}_{\mathcal{A}}(\square) \subset \mathbb{P}^{9}$ :

$$
\begin{aligned}
& 2125764 h^{6}+5484996 m_{00}^{2} h^{4} s-1574640 m_{00} g h^{3}+364500 m_{00}^{3} h^{3} t \\
& +3458700 m_{00}^{4} h^{2} s^{2}-2041200 m_{00}^{3} g h s+472500 m_{00}^{5} h s t-122500 m_{00}^{6} s^{3}+291600 m_{00}^{2} g^{2} \\
& -135000 m_{00}^{4} g t+15625 m_{00}^{6} t^{2} .
\end{aligned}
$$

This polynomial has 5100 terms in the $m_{i_{1} i_{2}}$.

The moments of order $\leq 3$ of probability measures on the triangle $\triangle \subset \mathbb{R}^{2}$ whose densities are linear functions

The moments of order $\leq 3$ of probability measures on the triangle $\triangle \subset \mathbb{R}^{2}$ whose densities are linear functions form a hypersurface in $\mathbb{P}^{9}$ of $\mathbb{Z}^{3}$-degree $(52,36,36)$ :

$$
\sum_{\mathcal{I} \in \mathbb{Z}_{\geq 0}^{d}}\binom{|\mathcal{I}|+d}{\mathcal{I}, d} \cdot m_{\mathcal{I}}\left(\triangle_{d}\right) \cdot t^{\mathcal{I}}=\prod_{k=1}^{d+1} \frac{1}{1-\left\langle x_{k}, t\right\rangle}
$$

Example $(d=1): \triangle_{1}=[a, b] \subset \mathbb{R}^{1}$

$$
\sum_{i=0}^{\infty}(i+1) \cdot m_{i} \cdot t^{i}=\frac{1}{(1-a t)(1-b t)}
$$

## Generating Functions

## Proposition (K., Shapiro, Sturmfels)

Let $P \subset \mathbb{R}^{d}$ be a convex polytope with vertices $x_{1}, x_{2}, \ldots, x_{n}$.

$$
\sum_{\mathcal{I} \in \mathbb{Z}_{\geq 0}^{d}}\binom{|\mathcal{I}|+d}{\mathcal{I}, d} \cdot m_{\mathcal{I}}(P) \cdot t^{\mathcal{I}}=\frac{\operatorname{adj}_{P}(t)}{\prod_{k=1}^{n}\left(1-\left\langle x_{k}, t\right\rangle\right)}
$$

## Generating Functions

## Proposition (K., Shapiro, Sturmfels)

Let $P \subset \mathbb{R}^{d}$ be a convex polytope with vertices $x_{1}, x_{2}, \ldots, x_{n}$.

$$
\sum_{\mathcal{I} \in \mathbb{Z}_{\geq 0}^{d}}\binom{|\mathcal{I}|+d}{\mathcal{I}, d} \cdot m_{\mathcal{I}}(P) \cdot t^{\mathcal{I}}=\frac{\operatorname{adj}_{P}(t)}{\prod_{k=1}^{n}\left(1-\left\langle x_{k}, t\right\rangle\right)}
$$

The adjoint polynomial $\operatorname{adj}_{P}(t)$ of $P$ was introduced by Joe Warren in 1996 to define barycentric coordinates on $P$.

## Generating Functions

$$

The adjoint polynomial $\operatorname{adj}_{P}(t)$ of $P$ was introduced by Joe Warren in 1996 to define barycentric coordinates on $P$. It was first defined for polygons by Wachspress in 1975:

## The Adjoint of a Polygon

## Definition (Wachspress)

The adjoint $\boldsymbol{A}_{P}$ of a polygon $P \subset \mathbb{P}^{2}$ is the minimal degree curve passing through the intersection points of pairs of lines containing non-adjacent edges of $P$.

$$
\left(\operatorname{deg} A_{P}=|V(P)|-3\right)
$$

## The Adjoint of a Polygon

## Definition (Wachspress)

The adjoint $\boldsymbol{A}_{P}$ of a polygon $P \subset \mathbb{P}^{2}$ is the minimal degree curve passing through the intersection points of pairs of lines containing non-adjacent edges of $P$.

## Proposition (Warren)

Wachspress' adjoint curve $A_{P}$ of $P$ is defined by Warren's adjoint polynomial $\operatorname{adj}_{P^{*}}(t)$ of the dual polygon $P^{*}$, i.e. $Z\left(\operatorname{adj}_{P^{*}}\right)=\boldsymbol{A}_{\boldsymbol{P}}$.
(Recall: $\left.P^{*}=\left\{t \in \mathbb{R}^{n} \mid \forall x \in V(P):\langle x, t\rangle \leq 1\right\}\right)$

## The Adjoint of a Polytope

- $P$ : polytope in $\mathbb{P}^{d}$
- $\mathcal{H}_{P}$ : hyperplane arrangement spanned by facets of $P$

## The Adjoint of a Polytope

- P: polytope in $\mathbb{P}^{d}$
- $\mathcal{H}_{P}$ : hyperplane arrangement spanned by facets of $P$
- $\mathcal{R}_{P}$ : residual arrangement of linear spaces that are intersections of hyperplanes in $\mathcal{H}_{P}$ and do not contain any of face of $P$

## The Adjoint of a Polytope

- P: polytope in $\mathbb{P}^{d}$
- $\mathcal{H}_{P}$ : hyperplane arrangement spanned by facets of $P$
- $\mathcal{R}_{P}$ : residual arrangement of linear spaces that are intersections of hyperplanes in $\mathcal{H}_{P}$ and do not contain any of face of $P$

## The Adjoint of a Polytope

- $P$ : polytope in $\mathbb{P}^{d}$
- $\mathcal{H}_{P}$ : hyperplane arrangement spanned by facets of $P$
- $\mathcal{R}_{P}$ : residual arrangement of linear spaces that are intersections of hyperplanes in $\mathcal{H}_{P}$ and do not contain any of face of $P$

## The Adjoint of a Polytope

- $P$ : polytope in $\mathbb{P}^{d}$
